To facilitate the connection of Polymer fibers via a plug less device that provides a very low db loss, ELII is today introducing a device that plugs in available wall plates already in the market. The device connects Polymer wires via a push in mechanism that secures the wires in place providing to the end user an easy way to connect varieties of POF products. The plug less device accepts wire with a diameter of 2.2 mm.

The standard color is black but other colors are possible. The order number for the black one is: **ELII-2.20-L-B.**
